(54) TELEVISION RECEIVER

(57)Abstract:

PURPOSE: To reduce a production cost by evading substantial change in hardware design.

CONSTITUTION: This receiver is comprised in such a way that switch parts SW1, SV2 are switched so as to supply the video signal of the tuner part 1 to a CRT 6, and audio signals L, R to a VTR 4 and speakers L, R(9, 12) by a control part 13, and furthermore, the channel selection operation of the tuner part 2 is stopped when, the same channel is channel-selected by tuner parts 1, 2. Thereby, it is possible to solve a beat due to the influence of a local frequency by the operation of a control part without depending on the hardware design and to reduce burden on a designer.
